Access to Lactanet Data – Description of services

Lactanet data on any dairy producer can be accessed by third parties (service providers, professionals, industry advisors) **with the written consent of the producer** (complete form F-49 on reverse).

The authorized person will be issued a *contact number* and a *personal identification number (PIN)* distinct from that of the producer. This identification allows the industry advisor to access the data of all producers who grant written consent with form F-49. A producer may grant access to several industry advisors.

ACCESS MODES

1) DATA ACCESS BY DOWNLOAD

Data can be downloaded from the Lactanet Web site by following the link *on-line data access*. TIP and XML files can also be sent directly to the user by e-mail (check the corresponding box on form F-49). According to the user's need, **five (5) file formats are available**:

- **TIP**: TIP files (*Transfer of Information from Lactanet*) allow the integration of 70 different data on each cow directly into your management software. Available 3 days after the test.
- **XML**: XML-TIP files allow the integration of data in the **Lac-T** software.
- **XML-VET**: XML-VET files allow the integration of data in veterinarians' **DS@HR** software, including data on the eight diseases of interest for genetic evaluation.
- **DairyComp 305**: These files allow the integration of data in the **DairyComp 305** software.
- **Client Reports on MySite**: Reports can be downloaded as a PDF or MHT file for direct on-screen viewing or printing. Usually on-line 2 days after the test date.

2) MOBILE ACCESS TO DATA

- **Vision2000 Data Access**: By installing the proper mobile application, users will have access to herd and cow data on their mobile devices.
