

Dairy knowledge at your fingertips- Atlantic Edition

October 2019 - Volume 6

IN THE NEWS

Are you really safe when you enter the silo?

As most are just about to fill up the silo with grass or corn silage, this important question needs to be raised. We now know that the fermentation process of forage produces toxic gases, which present significant health risks to workers who are exposed. In addition to the recommended preventive measures, collective awareness and mobilization of all stakeholders are required to ensure the health and safety of agricultural workers.

DRY OFF AND TRANSITION

Subclinical ketosis: Are your cows hiding something?

There is an old saying; what you don't know can't hurt you... but when it comes to your cows, there is nothing further from the truth! Although they may not show it, many cows suffer from ketosis shortly after calving: subclinical ketosis. This metabolic disease can have significant impacts on a herd so how can we counter this silent enemy?

ROBOTIC MILKING

Is there one irresistible flavour that will draw cows to the milking robot?

Contrary to what one might think, it's not so much the desire to be milked as the desire to eat that attracts cows to the robotic milker! The dairy feed industry would very much like to single out THE most appetizing concentrate or magic additive that

ORGANIC DAIRY PRODUCTION

Quality organic milk

Quality milk is best achieved, in organic milk production, using a global approach where all of the practices related to somatic cell count (SCC) are optimized. In this article, our senior advisor in Organic dairy production, Marie-Élaine Smith, presents certain practices that stood

would entice cows to be milked.
